

AURELIA TOWER

Biophilic Parametric Landmark | Reer Concept Workflow + xFigura Rhino Exploration

Project dossier for concept narrative, design system, digital workflow, cinematic video prompting, keyframe generation, facade detail prompting and exploded structural diagram prompting. The tower design is treated as a locked master reference: slender tapered glass body, bronze-gold vertical spine, central dark glazed slit, curved curtain wall rhythm and lotus-like golden crown.

Prepared as a reusable prompt and production document for portfolio, competition board development and cinematic architectural visualisation.

1. Project Identity

Project name

AURELIA TOWER

Tagline: Where Nature Evolves Into Skyline.

Project description

AURELIA TOWER is a visionary biophilic skyscraper that explores the convergence of computational design, environmental performance and nature-inspired architecture. Conceived as a vertical ecosystem within the contemporary city, the tower reinterprets natural growth patterns through a refined parametric form, resulting in a slender aerodynamic silhouette crowned by a distinctive golden biomorphic structure.

The concept was initiated in Reer to develop a biophilic parametric tower. The design was then integrated into xFigura within Rhino for further exploration, allowing form, facade articulation, structural expression and visual refinement to be tested within the modelling environment itself. This workflow creates a bridge between AI-assisted ideation, parametric design logic and architectural visualisation.

The tower combines a blue-grey transparent curtain wall, bronze-gold vertical fins, a central dark glazed spine and a lotus-like crown. These elements create a strong skyline identity while also expressing themes of organic emergence, vertical growth, environmental responsiveness and computational precision.

One-line statement

AURELIA TOWER is a biophilic parametric landmark conceived through Reer and further developed in xFigura within Rhino, transforming nature-inspired computational intelligence into a sculptural vertical ecosystem.

External reference context

Terrapin Bright Green describes biophilic design as a framework linking nature, human biology and the built environment, with patterns that can support wellbeing and design application. Rhino describes Grasshopper as a visual programming environment tightly integrated with Rhino 3D modelling tools. Reer describes itself as an intelligent design environment for CAD and BIM workflows across Rhino and other tools. xFigura has described its Rhino 8 plugin as a way to generate, visualise and refine concepts without leaving the modelling environment.

2. Design System Analysis

Master reference render, locked for all image and video prompts. The tower geometry, crown, facade rhythm and colour palette must remain unchanged.

Formal language

The tower is a tall, tapered and aerodynamic vertical form. Its body reads as an elongated oval shaft with a soft curvature that narrows subtly towards the crown. The overall identity is biomorphic rather than rectilinear, suggesting leaf, petal and seed pod references without becoming literal.

Facade language

The facade is defined by a blue-grey transparent curtain wall, regular horizontal floor bands, a central dark glazed slit and expressive bronze-gold vertical fins. The main visual tension comes from the contrast between soft transparent glass and sharp metallic vertical elements.

Crown and skyline identity

The crown is the most iconic element. It appears as a golden lotus or leaf-like structure opening above the tower shaft. This should be treated as the project symbol and must never be redesigned in future images or video clips.

Urban setting

The tower sits at the end of a generous tree-lined pedestrian boulevard with people, benches, paving and soft daylight. This gives the project a civic, human-scaled public realm rather than an isolated object-tower expression.

3. Digital Design Workflow

Stage	Tool / Method	Purpose	Output
01	Reer	Initial AI-assisted concept generation for biophilic tower massing and parametric intent.	Concept direction, form families and nature-inspired tower logic.
02	Rhino	Model environment for geometric control, massing refinement and design continuity.	Editable tower base, body, crown and facade references.
03	xFigura inside Rhino	Further exploration, rendering, AI-assisted visualisation and design iteration inside the Rhino workflow.	Consistent visual outputs, cinematic shots, facade studies and diagram ideas.
04	Prompting system	Structured prompt framework to lock design consistency across keyframes and video.	Reusable prompts for image, video, details and exploded diagrams.
05	Post-production	Editing, titles, labels, grading and sequence assembly in video or layout software.	Portfolio PDF, competition sheet, cinematic film and social media content.

Workflow statement for portfolio

The project uses Reer as the initial concept-development layer for a biophilic parametric tower, then integrates the evolving concept into xFigura within Rhino for further exploration, visual refinement, facade analysis and cinematic storytelling. This keeps the design process connected to architectural modelling rather than treating AI images as isolated outputs.

4. Prompting Process Structure

Use this structure for every prompt in the project. It keeps the tower identity consistent while allowing different outputs such as cinematic video, facade close-ups, exploded diagrams and portfolio keyframes.

Prompt Layer	What it controls	AURELIA TOWER application
ROLE	Who is producing the output.	Architectural visualisation artist, computational designer, facade design specialist, cinematic director.
TASK	What needs to be generated.	Create a cinematic shot, close-up facade study, exploded axonometric diagram or keyframe render.
CONTEXT	Narrative and design intent.	Biophilic parametric landmark, nature-inspired vertical ecosystem, urban public realm.
GEOMETRY	The fixed physical form.	Slender tapered oval glass tower, bronze-gold spine, dark central slit and lotus crown.
LOGIC	Design reasoning and parametric behaviour.	Organic growth, aerodynamic taper, modular facade rhythm, vertical structural expression.
SITE	Setting and atmosphere.	Tree-lined boulevard, public plaza, soft daylight or night landmark condition.
MATERIAL	Material, texture and light behaviour.	Blue-grey glass, brushed bronze-gold metal, warm crown highlights, realistic reflections.
OUTPUT	Camera, format and resolution.	16:9 video keyframe, 8K render, cinematic dolly, orbit, crane-up, exploded diagram.
CONSTRAINTS	Non-negotiable design rules.	Do not alter tower geometry, crown, facade rhythm, colour palette or proportions.
REFINEMENT	Final polish and iteration.	Clean labels, controlled motion, readable diagrams, no unstable text, no over-processing.
STYLE	Visual character.	Premium architectural competition style, cinematic realism, BIM-style diagrammatic clarity.
PROMPT_ENGINEERING	Control layer and negative prompt.	Master consistency lock, negative prompt, camera direction, frame sequencing.

5. Master Consistency Lock

MASTER CONSISTENCY LOCK

Use the same futuristic tower from the reference image. Preserve the exact tower geometry, proportions, tapered oval glass body, blue-grey transparent curtain wall, bronze-gold vertical spine, dark central glazed slit, soft curved facade rhythm, horizontal floor bands, elegant plaza setting and golden lotus-like crown. Do not redesign the tower. Do not change the crown. Do not alter the facade pattern. Do not add extra wings, random spires, new balconies, different materials or a different skyline. The tower must remain identical across all shots.

GLOBAL NEGATIVE PROMPT

No tower redesign, no warped geometry, no melted glass, no distorted crown, no extra towers attached, no cartoon style, no fantasy sci-fi weapons, no random antenna, no broken facade, no unreadable text, no excessive fog, no overexposed sky, no change to material palette, no incorrect proportions, no duplicated crown, no unstable camera shake.

How to use

Paste the master consistency lock before every image or video prompt. Paste the negative prompt after every prompt. This is the most important method for maintaining the same tower across keyframes, close-ups, diagrams and cinematic clips.

6. Keyframe Image Prompt Library

Generate these still images first. Each still can then be used as an image-to-video input for a short cinematic clip.

Keyframe Image 01, Wide establishing hero

Create a high-resolution wide architectural hero render of the same futuristic tower from the reference image. Preserve the exact tower design, tapered blue-grey glass body, bronze-gold spine, dark central glazed slit, horizontal floor bands and golden lotus crown. Show the tower centred at the end of a tree-lined public boulevard with people, benches, soft paving and warm golden-hour light. Photorealistic architectural competition render, 16:9, 8K, cinematic realism.

Keyframe Image 02, Low-angle base to crown

Create a low-angle architectural render looking upward from the tower base towards the golden lotus crown. Keep the tower exactly the same as the reference. Emphasise the curved glass facade, bronze-gold vertical spine, central dark glazed slit and elegant taper. Realistic reflections, soft daylight, sharp facade detail, 16:9, 8K.

Keyframe Image 03, Crown detail close-up

Create a close-up render of the upper tower and golden lotus crown. Preserve the original crown shape exactly. Show brushed gold metal, subtle seams, structural ribs, blue-grey glass shaft below and dark central glazed slot. Clean sky background, premium architectural detail render, 16:9, 8K.

Keyframe Image 04, Facade technical close-up

Create a photorealistic close-up render of the tower facade with a clean technical overlay panel beside it. Keep the tower unchanged. Show unitised curtain wall panels, mullion grid, floor slab edge, bronze vertical fin, double-skin facade cavity and central glazed slot. Use thin white and gold annotation lines, readable minimal labels, 16:9, 8K.

Keyframe Image 05, Exploded facade diagram

Create a premium exploded axonometric diagram of the same tower. Keep the complete tower visible in the centre, unchanged. Separate facade and structure layers beside it: curved glass curtain wall, bronze mega-fins, floor slab rings, central core, perimeter columns, outriggers, crown support frame and ventilation cavity. Clean white and gold technical linework, readable callouts, 16:9, 8K.

Keyframe Image 06, Night hero

Create a night-time architectural render of the same tower. Preserve the exact tower design. Illuminate the golden crown softly, show warm interior light through the central dark glazed slit, subtle reflections on the blue-grey glass facade and calm plaza lighting below. Elegant, realistic, premium, 16:9, 8K.

Keyframe Image 07, Sunset reflection hero

Create an ultra-realistic sunset architectural hero render of the exact same tower. Preserve geometry, crown, facade rhythm, bronze-gold spine, glass curtain wall and plaza. Warm sunset light striking the crown. Long shadows. Premium luxury atmosphere. Cinematic composition. 16:9, 8K.

Keyframe Image 08, Final outro hero

Create an ultra-high-end architectural hero render of the exact same tower standing centrally within the boulevard. Soft twilight sky. Crown illuminated. Glass facade glowing subtly. Elegant public realm. Large negative space above the tower for branding. Premium architectural competition quality. 16:9, 8K.

7. Keyframe to Video Sequence Matrix

Scene	Use Keyframe	Generate with Video Prompt	Motion	Purpose	Duration
01	Keyframe 01	Video Prompt 01, Boulevard Reveal	Slow forward dolly	Introduce setting and scale	6 to 8 sec
02	Keyframe 01, cropped	Video Prompt 05, Plaza Life	Eye-level walking camera	Show human experience	5 to 7 sec
03	Keyframe 02	Video Prompt 02, Vertical Crane-Up	Crane-up from base to crown	Reveal height and monumentality	6 to 8 sec
04	Keyframe 04	Video Prompt 04, Facade Glide	Upward diagonal facade tracking	Show material and facade detail	5 to 6 sec
05	Keyframe 03	Video Prompt 03, Crown Orbit	Slow 180 degree orbit	Present the identity crown	6 to 8 sec
06	Keyframe 05	Video Prompt 06, Exploded Diagram	Subtle separation of layers	Explain facade and structure	8 to 10 sec
07	Keyframe 07	Video Prompt 07, Sunset Hero	Slow push-in	Emotional climax	6 to 8 sec
08	Keyframe 06	Video Prompt 08, Night Landmark	Slow orbit and illumination	Show night-time landmark value	6 to 8 sec
09	Keyframe 08	Video Prompt 10, Final Outro	Slow pull-back	Create brand memory	5 to 6 sec

Recommended final order: Context, human experience, scale, detail, identity, technology, emotion, landmark, brand memory. Total target duration: 60 to 75 seconds. Add titles, team code, captions and technical notes during post-production rather than relying on generated video text.

8. Cinematic Video Prompt Library

Video Prompt 01, Opening boulevard reveal

Create a cinematic architectural film shot using the reference tower as the locked design. A wide pedestrian boulevard leads directly towards the same slender futuristic tower. The camera begins at human eye level among trees, benches and people, then performs a slow forward dolly along the central plaza axis. The tower rises symmetrically in the distance, reflecting soft golden-hour light. Keep the tower exactly the same: tapered blue-grey glass body, bronze-gold vertical spine, dark central glazed slit and golden lotus crown. The mood is elegant, calm, premium and visionary. Realistic people walk slowly in the foreground, trees move gently in the breeze, sunlight glints on the glass facade. Ultra-realistic architectural cinematography, 24fps, 16:9, soft lens flare, natural motion, 8K, high-end real estate film style.

Video Prompt 02, Vertical crane-up tower reveal

Create a cinematic vertical crane-up shot of the same tower from the reference image. The camera starts at the base plaza, looking up along the curved glass facade, then slowly rises vertically along the bronze-gold spine towards the golden lotus crown. The facade panels, horizontal floor bands and central dark glazed slit remain perfectly aligned and identical to the reference. Show realistic reflections moving across the curved blue-grey curtain wall as the camera rises. The shot should reveal the tower elegance, aerodynamic taper and crown detail. Premium architectural film, smooth crane movement, no shaking, realistic daylight, glass reflections, bronze highlights, 8K, cinematic realism.

Video Prompt 03, Slow orbit around the crown

Create a close cinematic orbit shot around the upper portion of the same tower. Focus on the golden lotus-like crown, the tapered glass shaft beneath it, the bronze-gold vertical fins and the dark central glazed slit. The camera performs a slow 180 degree orbit around the crown, maintaining the original tower form exactly. The crown must not change shape. Show brushed gold material, fine seams, structural ribs, soft reflections and sunlight catching the edges. The background is a clean sky with soft clouds. Premium architectural detail film, ultra-sharp, realistic metal, realistic glass, smooth orbit, 8K, elegant and calm.

Video Prompt 04, Facade glide with technical overlay

Create a cinematic close-up facade tracking shot of the same tower. The camera glides slowly upward and diagonally across the curved blue-grey glass curtain wall, passing the bronze-gold vertical fin and dark central glazed slot. Add subtle architectural overlay graphics that appear beside the facade, not covering it: thin white and gold leader lines, minimal labels such as unitised curtain wall, bronze mega-fin, double-skin facade, floor slab edge, mullion grid, ventilation cavity and central service core. Text must be clean, minimal and readable. The tower design remains exactly unchanged. Premium architectural documentary style, photorealistic glass, precise linework, slow motion, 8K, polished competition presentation.

Video Prompt 05, Plaza life and human scale

Create a cinematic ground-level shot at the base of the same futuristic tower. The camera moves slowly through the public plaza with people walking, sitting on benches and gathering under trees. The tower remains in the background, perfectly consistent with the reference image: tapered glass body, bronze-gold spine, central dark slit and golden lotus crown. Emphasise scale, urban life, landscape and arrival experience. Show realistic paving, soft tree shadows, warm evening sunlight and subtle reflections on the tower facade. The camera slowly pans from the active public realm upwards towards the tower entrance. Premium architectural urban film, realistic people, calm movement, 8K.

Video Prompt 06, Exploded facade transition shot

Create a cinematic architectural analysis video shot of the same tower. Begin with the complete tower standing intact. Then, without changing the tower, show a transparent exploded technical overlay appearing beside it. The facade layers gently separate outward as diagrammatic elements: outer curved glass curtain wall panels, bronze vertical mega-fins, horizontal floor slab rings, central core, perimeter columns, outrigger belt zones, double-skin cavity and golden crown support frame. The original tower remains visible and unchanged in the centre. Use clean white and bronze linework, minimal labels, transparent technical panels and a premium BIM-style diagram aesthetic. Smooth slow animation, no chaotic explosion, no unrealistic mechanical parts, 8K architectural competition film style.

Video Prompt 07, Sunset reflection hero shot

Create a cinematic sunset hero shot of the same tower. The camera is positioned low on the boulevard, looking slightly upward as the sun sets behind soft clouds. The curved glass facade reflects golden light, the bronze-gold spine glows subtly and the lotus crown catches the final sunlight. The tower geometry and facade design must remain exactly the same as the reference image. The camera performs a slow push-in with shallow depth of field in the foreground trees and pedestrians. Premium cinematic architecture film, warm golden-hour colour grading, realistic atmosphere, elegant reflections, 8K, smooth motion.

Video Prompt 08, Night illumination shot

Create a cinematic night-time architectural shot of the same tower, keeping the tower design exactly unchanged. The blue-grey glass facade becomes subtly reflective at night, the bronze-gold vertical spine is softly illuminated, the dark central glazed slit glows faintly from internal lights, and the golden lotus crown has refined warm lighting. The public plaza has soft pathway lighting, trees, people silhouettes and calm urban activity. The camera performs a slow orbit from the boulevard towards the front of the tower. Premium night architectural visualisation, realistic lighting, no neon overload, no cyberpunk exaggeration, elegant luxury atmosphere, 8K.

Video Prompt 09, Drone descent into plaza

Create a cinematic drone-style shot of the same tower. The camera begins high in the sky, looking down at the tower crown and surrounding boulevard, then slowly descends and tilts forward to reveal the tower full height and public plaza. The tower must remain identical to the reference image, with the same golden lotus crown, tapered glass shaft, bronze-gold spine and central dark glazed slit. The movement is smooth, controlled and realistic, like a premium architectural film. Soft daylight, realistic city context, clean tree-lined boulevard, 8K, cinematic drone movement.

Video Prompt 10, Final brand outro shot

Create a final cinematic still-to-motion shot of the same tower standing centred in the boulevard. The camera slowly pulls back while the tower remains perfectly sharp and monumental. The golden crown catches warm sunlight, the blue-grey glass body reflects the sky, and the bronze-gold spine forms a strong vertical identity. The public plaza feels calm, premium and visionary. Add no large text inside the generated video. Leave clean negative space in the sky for later title editing. Ultra-realistic architectural film, smooth pull-back, premium competition presentation, 8K, elegant final outro.

9. Detail and Diagram Prompt Library

Close-Up Elemental Design Shot

Create a high-resolution architectural close-up visualisation of the same futuristic tower shown in the reference image. Preserve the tower design exactly, including the slender tapered oval glass body, smooth aerodynamic vertical profile, transparent blue-grey curtain wall, bronze-gold vertical spine, golden leaf-like crown, central dark glazed slit, soft metallic fins, curved facade rhythm and elegant plaza-scale proportions. Do not alter the tower geometry, do not change the crown shape, do not redesign the facade, and do not add extra floors or new forms.

Camera view: zoomed architectural close-up from a slightly low-angle perspective, focusing on the middle and upper portion of the tower, with the crown clearly visible. The image should feel like a premium architectural competition detail board, combining photorealistic rendering with clean technical overlay drawings. Keep the tower realistic, sharp, elegant and monumental.

Add a semi-transparent technical annotation panel on one side of the tower, not covering the tower. Include precise architectural callouts with thin white and bronze leader lines pointing to key elements: golden leaf crown, aerodynamic roof fin, vertical bronze structural spine, unitised glass curtain wall, horizontal floor bands, central atrium glazed slot, perimeter mega-fins, sky-lobby zone, facade mullion grid, internal service core indication and double-skin facade zone. Use minimal, clean, readable architectural text, small labels, numbered callout dots and a compact legend box.

Exploded Facade and Structural System Diagram

Create a premium exploded axonometric architectural diagram of the same futuristic tower from the reference image. Preserve the original tower design exactly as the central reference object: slender tapered glass skyscraper, oval aerodynamic body, blue-grey transparent curtain wall, bronze-gold vertical spine, central dark glazed slot, horizontal floor bands, smooth curved facade and golden leaf-shaped crown. Do not redesign the tower, do not change its proportions, do not change the crown and do not invent a new building.

Composition: show the tower in the centre as a clean semi-transparent architectural model, with carefully separated exploded layers floating beside it. The exploded layers should reveal the design logic of the facade and structure while keeping the original form recognisable. Use a clean dark-to-light architectural presentation background with thin technical linework, gold accents, white labels and subtle transparent panels.

Exploded components to show: outer unitised glass curtain wall panels, horizontal floor slab rings, bronze-gold vertical mega-fins, central dark glazed atrium or vertical sky-slot, internal concrete or composite central core, perimeter columns aligned with the facade curvature, outrigger or belt-truss zones, crown support frame beneath the golden leaf-like roof petals, double-skin facade cavity with ventilation arrows, enlarged mullion detail, base lobby and structural transfer zone, lift and service core indication.

10. Technical Information to Add Beside Drawings

Use these concise labels in facade studies, exploded diagrams and competition sheets. Add them in post-production where possible for accuracy and legibility.

Category	Suggested labels
Facade	Unitised glass curtain wall, double-skin facade cavity, curved mullion grid, floor slab edge, ventilation path, solar control fin.
Structure	Central core, perimeter columns, bronze mega-fins, outrigger belt zone, crown support frame, transfer zone.
Biophilic logic	Biomorphic crown, natural analogues, vertical growth, daylight, prospect, shaded public realm, tree-lined arrival.
Environmental logic	Aerodynamic taper, facade shading, daylight reflection, stack ventilation potential, reduced solar gain, public realm cooling.
Cinematic notes	No generated text inside video, add labels later, keep motion slow, preserve geometry, avoid excessive zoom or fast cuts.

Suggested final presentation caption

AURELIA TOWER explores a biophilic parametric approach to high-rise architecture, using AI-assisted concept generation in Reer and further exploration through xFigura inside Rhino. The design translates natural growth, aerodynamic taper and facade intelligence into a refined vertical landmark with a transparent glass body, bronze structural expression and lotus-like crown.

11. Final Video and Portfolio Production Checklist

Step	Action	Quality check
01	Generate all keyframe images first.	Check crown, facade rhythm, proportions and material palette match the master reference.
02	Create each video clip separately from its matching keyframe.	Keep clips short, controlled and consistent.
03	Avoid AI-generated text inside videos.	Add all titles and labels in editing software for accuracy.
04	Use slow transitions between scenes.	No hard cuts unless moving from render to diagram.
05	Apply one colour grade across all clips.	Warm gold highlights, blue-grey glass, soft contrast and cinematic clarity.
06	Add technical overlays manually where possible.	Keep labels readable, aligned and not covering the tower.
07	Export final film.	Recommended 16:9 or 2.39:1, 24fps, 4K or 8K master export.

Recommended film structure

Context, human experience, scale, facade detail, crown identity, technical intelligence, sunset emotional climax, night landmark condition and final brand memory. This sequence introduces the project like a professional architecture film rather than a random collection of renders.

12. References and Research Sources

The project narrative is authored for this concept and should be credited as original project documentation. The following sources support the wider terminology and workflow references used in this dossier.
